K-37 SEPTIC TANK TREATMENT

ROEBIC Septic Tank Treatment adds specially cultured bacteria that accelerate the break down of sewage waste. It contains no harsh chemicals that can destroy the natural bacteria needed by your septic system to work properly.

K-37 prevents the clogging of inlet and outlets that can lead to unpleasant odors and overflowing receptacles.

DIRECTIONS

1. Shake well. Pour the entire contents into the toilet bowl. Flush twice and discard the container. Do not store partial container.
2. Use one quart per 500 gallon tank capacity.
3. Repeat this treatment once a year or as needed.

K-37 is to be used as a preventative treatment. If tanks or drains are currently clogged use **K-57 Septic & Cesspool Cleaner**.

Non-Flammable

CAUTION: Harmful if taken internally.

Keep out of reach of children
