## ROEBIC<sup>®</sup> Bacterial Composter

ISO-14021  
\*SCS-BIO-01075

**ROEBIC Bacterial Composter** is a blend of specialized bacteria which accelerate the breakdown of plant material in compost piles. **Bacterial Composter** works on green or dry grass clippings, weeds, leaves, shrub trimmings and vegetable scraps and peelings. These bacteria grow over a wide temperature range, assuring constant action even after turning or aerating the compost.

There is no need to add lime to your compost with **Bacterial Composter**. The special formula is buffered to maintain pH, and is rich in calcium and magnesium. It also contains a nitrogen rich nutrient to promote rapid growth of bacteria.

### DIRECTIONS

1. Spread an even layer of Composter over pile surface.
2. Water well, repeating often enough to keep the compost pile damp.
3. Repeat application each time another layer is added to the compost pile.

**Non-Flammable**  
**CAUTION: Harmful if taken internally.**  
Keep out of reach of children
